The lead-acid battery is a type of rechargeable battery first invented in 1859 by French physicist Gaston Planté ... Starting batteries are lighter than deep-cycle batteries of the same size, because the thinner and lighter cell plates do not ...

Lead-acid batteries are comprised of a lead-dioxide cathode, a sponge metallic lead anode, and a sulfuric acid solution electrolyte. The widespread applications of lead-acid batteries include, among others, the traction, starting, lighting, and ignition in vehicles, called SLI batteries and stationary batteries for uninterruptable power supplies and PV systems.

Each cell produces 2 V, so six cells are connected in series to produce a 12-V car battery. Lead acid batteries are heavy and contain a caustic liquid electrolyte, but are often still the battery of choice because of their high current density. Since these batteries
