A. Flooded Lead Acid Battery. The flooded lead acid battery (FLA battery) uses lead plates submerged in liquid electrolyte. The gases produced during its chemical reaction are vented into the atmosphere, causing some water loss. Because of this, the electrolyte levels need regular replenishment. B. AGM Battery

A lead acid battery is a kind of rechargeable battery that stores electrical energy by using chemical reactions between lead, water, and sulfuric acid. The technology behind these batteries is over 160 years old, but the reason they're still so popular is because they're robust, reliable, and cheap to make and use.

The global market value of lead-acid batteries was about 43.1B US\$ in 2021, and its projected value by 2030 is 72.7B US\$ [10]. In addition, LABs are commonly used as a benchmark for other energy storage systems. LABs are generally classified into two primary types: flooded and valve-regulated/sealed (VRLA/SLA).
