It is the equipment ground (EGC). This ground is going to originate at the ground busbar in the main breaker panel. This is usually a bonded dual ground, one being from an earthing source (perhaps a water pipe), and one from your service provider. This EGC runs (or should run) to every electrical outlet in the house.

At the heart of every solar system, lies the solar inverter, a crucial component that converts the direct current (DC) generated by solar panels into alternating current (AC) for use in homes and businesses.
