Film-foil capacitors or polymer capacitors are nonpolarized electrical capacitors (such as ceramic) with two plates of aluminum foil, which act as the electrodes separated by insulating plastic films or papers as the dielectric. Fig. 8.6A shows commercially available film-foil capacitors in various shapes and sizes.

What is an aluminum electrolytic capacitor? Aluminum electrolytic capacitors, often called electrolytic capacitors, are usually selected because they offer a relatively large capacitance for a relatively small physical size. Aluminum electrolytic capacitors tend to be readily available, and with high voltage values (on the order of 700 V).
