AC charging; DC charging; Wireless charging. 1. AC charging: AC Charging refers to the process of charging, when EV is connected to an AC power source, which could be a standard socket or an AC charging station. There are four charging modes (combining AC and DC) based on how the EV is connected to the power source.

DC Charging. Unlike AC charging, which relies on an onboard charger to convert AC power from the grid to DC power for the battery, DC charging, and its inner workings involve this conversion being done externally at the charging station.. So these stations can have much larger converters which allows for a much faster charging speed.
