Solution. We start by making a circuit diagram, as in Figure (PageIndex{7}), showing the resistors, the current, (I), the battery and the battery arrow. Note that since this is a closed circuit with only one path, the current through the battery, (I), is the same as the current through the two resistors. Figure (PageIndex{7}): Two resistors connected in series with a battery.

A century or so ago, the number of cars on Earth numbered in the thousands. Today, there are something like a billion cars--roughly one for every seven people on the planet, and the number's expected to hit 2 billion by 2040. Think of Earth as a giant gas station with only a limited supply of fuel and you'll realize quite quickly that we have a problem.
