And because most multi-point inspections evaluate your vehicle on a rating scale (green = good; yellow = needs repaired soon; red = needs repaired now), it provides you with the information needed to plan ...

Checks To Perform During Battery Visual Inspection 1. Check that the right battery is installed. Compare the cold cranking amp (CCA) rating of the battery with the vehicle manual requirement. Compare the battery size and positional mounting with the vehicle manufacturer's recommendation. Remember to check the post inspections also. 2.

The battery state of charge numbers are largely irrelevant unless the hv battery has failed and the car won't start. As the car operates there is always a load on the high voltage system and often a concurrent charge as well. So the battery modules continually change voltage making the scanner speed and turnaround important.

Battery Energy Storage System Inspection and Testing Guidelines

The EV Battery Rating is based on this vehicle's current expected range relative to the vehicles expected range when new. `{battery_badge_text}` View the free battery report CPO Warrantied
