Causes of Battery Leakage. Battery leakage can result from a variety of factors, including: 1. Overuse and Expired Batteries. Using batteries beyond their recommended lifespan or expiration date increases the likelihood of leakage. As batteries age, the materials inside degrade, leading to potential breaches in the casing. 2. Physical Damage

The electrical driving force across the terminals of a cell is known as the terminal voltage (difference) and is measured in volts. When a battery is connected to a circuit, the electrons from the anode travel through the circuit toward the cathode in a direct circuit. The voltage of a battery is synonymous with its electromotive force, or emf.
