Battery capacity calculator converts between amp-hours and watt-hours. As you might remember from our article on Ohm's law, the power  $P$  of an electrical device is equal to voltage  $V$  multiplied by current  $I$ :  $P = V \times I$ . As energy  $E$  is power  $P$  multiplied by time  $T$ , all we have to do to find the energy stored in a battery is to multiply both sides of the equation by time:
