The next time when your iPhone shuts down due to insufficient charge, plug your device into a power outlet and charge it continuously for four hours without using the phone. If this solves your problem, then from now on, once a month, completely run down your device and charge the battery to 100%.

Back in the "Power & battery section", expand the "Screen and sleep" section, and you can use the four drop-down menus to choose when your laptop display should be switched off, and when your...

Hello Internet, I am new to ESP32 and I am trying to make a project that is supposed to use an external power source. I am using an ESP32-WROOM-32 from Az-Delivery and a 380mah 3.7v LiPo battery to power the board. I know there are solutions like attaching it to the 5v pin or using a voltage regulator but in the end I am still very skeptical.

Battery power down add power
