The primary problem is the voltage; a 3 phase inverter requires a DC voltage that is 141% higher than the output AC voltage, so at a simple 12VDC input, the most you can get from it is 8.5VAC and that will not be enough to power up even the control boards of a modern VFD. Typically you need at least 70% of the rated voltage, so for a 400V VFD, you will need at ...
