I purchased this device to shut off loads connected my solar power shed when the primary batteries get low. My goal was to have power off at 55% battery voltage (12.15V) and resume once battery voltage gets above 12.8V. Being an unconditioned space, the shed temperature expected range throughout the year is from -23F (-30C) to +113F (45C). Setup:

Understanding the battery voltage lets you comprehend the ideal voltage to charge or discharge the battery. This Jackery guide reveals battery voltage charts of different ...

To determine if a battery is fully charged using a battery charger, you need to check the voltage reading on the voltmeter. A fully charged 12V battery should read between ...

This is my experience with the Noco Genius 5 smart battery charger. I bought this on the Black Friday sale at Amazon for \$45.46 which is 50% off the list price. It is a smart charger that outputs up to 5 amps and can charge 12 Volt lead acid batteries, 12V AGM, 12V lithium, and also 6V...

After two hours the battery voltage was still 12.74 V, then with ignition 12.24 V, then idling with engine on 14.88 V (without adding gas). I went for about 7 miles, which was about 15 minutes. At that time, the battery voltage was still 14.23 V after the drive when idling. I had the opportunity to wait in the parking lot and after measuring it ...
