

Can the built-in battery be removed from the power supply

What to Look For in an Uninterruptible Power Supply Many smart devices have built-in battery packs, with modern laptops packing enough cells to last a whole day. But typical desktop computers, routers, and similar devices still need to be plugged into a power source all the time to work. That's where an uninterruptible power supply ...

It depends entirely on how the engineers designed the power and charge circuits. Most modern laptops with the built-in batteries are designed such that the charger is only connected to charge the battery and the system is always running on the battery. If you remove the battery there is no power to the motherboard and it does not come on.

Output power kVA: 1, 2, 3 kVA Input voltage: 200, 208, 220, 230, 240 V Output voltage: 240, 200, 208, 220, 230 V. The Standby UPS provides comprehensive protection in a small and economic package. The UPS is more compact and offers greater comprehensive power protection against surges and spikes.

A system needs a USB C port that specifically supports PD (Power Delivery) and I believe only MacBook Air models from 2018 onwards can do that. PD (Power Delivery) has nothing to do with USB 3.0 or any other USB standard; it is not inherent to USB ports. Best to just get a new battery installed.
