Refrigerator compressors are made up of several different components, including the start relay, overload protector, capacitor, and compressor. All of these components are interlinked, with the start relay and overload protector helping to protect the system from overloads, while the capacitor acts as a reserve for the system to draw on.

This Craftsman Motor is of the capacitor-start type designed for use on a single-phase, 60-cycle, alternating current supply of 115 volts, with a simple means of reversing the

The hydrogen escapes by passing through the capacitor's rubber seal. Sealing. The capacitor element is sealed into a can. While most cans are aluminum, phenolic cans are often used for motor-start capacitors. In order to release the hydrogen the seal is not hermetic and it is usually a pressure closure made by rolling the can edge into a ...

dump the capacitor's charge into the coil primary winding. The poor old coil gets such a belt that it produces a much higher voltage in the secondary and fires the spark plug. Fig.1(c) shows the arrangement of our new CDI system. It has a DC-to-DC inverter with a regulated 300VDC output which charges up a 1&#181;F capacitor.
