Each cell in the series battery pack is sequentially labelled Bxi, and each MOSFET is sequentially labelled Sx0, Sx1, ..., Sx(2n+1). x is the group number of the series ...

Connecting Batteries in Series. A set of batteries is said to be connected in series when the positive terminal of one cell is connected to the negative terminal of the succeeding cell. The overall emf of the battery is the algebraic sum of all individual cells connected in series. If E is the overall emf of the battery combined by n number of ...

Portable equipment needing higher voltages use battery packs with two or more cells connected in series. Figure 2 shows a battery pack with four 3.6V Li-ion cells in series, also known as 4S, to produce 14.4V nominal. In comparison, a six-cell lead acid string with 2V/cell will generate 12V, and four alkaline with 1.5V/cell will give 6V.
