The power consumption could also vary with the other things like how bright the lcd screen is (if the device has any etc) Depending on the power supply the device has, it may be only around 85-90% efficient when converting 240v ac to 24v DC (or whatever your device uses), so if you measure 200w taken from the mains socket, the device may use ...

How to Convert kWh to mAh. To convert from kilowatt-hours (kWh) to milliampere-hours (mAh), use the formula: $\text{mAh} = \text{kWh} \times V \times 1,000,000$, where V denotes the battery's voltage. For example, if you have a 0.005 kWh battery operating at 5 volts: $\text{mAh} = .005 \times 5 \times 1,000,000$. So, a battery with 0.005 kWh at 5 volts has a capacity of 1,000 mAh.
