In this application note, we emphasize the function of an AC coupling capacitor is to block DC and not to approach the performance of an ideal capacitor. Furthermore, we have used standard low-cost capacitors for AC coupling on our evaluation boards at data rates up to 12.5 Gbps with good results. 2.1 What is Important?

In the case of (AC) coupling capacitors you want the most optimum capacitor for your signal frequencies. In practice the actual value of the capacitor does not matter too much as long as it is "enough". For example, to suppress a supply ripple of 100 Hz, a 10 nF capacitor isn't going to help much.

The characteristics of a capacitor vary mainly depending on the dielectric material used. The dielectric material determines the capacitance value, energy efficiency, and size of a capacitor. Fixed value capacitors can be broadly categorized into two: polar and non-polar capacitors. Non-polar capacitors include ceramic, film, and paper capacitors.

To examine how the input coupling capacitance will affect signal behavior and possibly lead to distortion, the value of the capacitor is defined as a global parameter CAP2. This is defined by opening the component properties dialog and ...

In this mode, a coupling capacitor is inserted in series with the measured voltage signal to eliminate any vertical offset of the displayed waveform due to DC voltage combined with the signal. This works fine when the AC component of the ...

The last example shows a polarized capacitor at the input and it is the wrong way round. It clearly contradicts the output coupling capacitor so the 3rd circuit has problems. In addition to this, the AC signal developed across a polarized decoupling capacitor should not be very much or you will run the risk of reverse polarization problems.

2.0 - Coupling Capacitors. The purpose of a coupling cap is to pass the wanted audio (AC) signal, while blocking any DC from preceding stages or source components. DC will cause pots to become noisy (scratching noises when operate), and cause relatively loud clicks when (if) muting relays or similar are used.
