Valve-Regulated Lead-Acid or VRLA, including Gel and AGM (Absorbed Glass Mat) battery designs, can be substituted in virtually any flooded lead-acid battery application (in conjunc ...

Both are recombinant batteries. Both are sealed valve-regulated (SVR) - also called valve-regulated lead-acid (VRLA). AGM batteries and gel batteries are both considered "acid-starved". In a gel battery, the electrolyte does not flow like a normal liquid. The electrolyte has the consistency and appearance of petroleum jelly.

VALVE REGULATED CELLS AND BATTERIES A valve regulated cell or battery is closed under normal conditions by a non-return control valve that allows gas to escape if the internal pressure exceeds a predetermined value. The valve does not allow gas (air) to enter the cell. The maximum pressure reached inside the cell

Valve Regulated Lead Acid (VRLA) batteries are a type of sealed lead-acid battery that does not require regular maintenance like traditional flooded batteries. The key to how VRLA batteries work lies in their design, which includes valves that regulate the internal pressure of the battery.

Valve-regulated lead-acid (VRLA) technology encompasses both gelled electrolyte and absorbed glass mat (AGM) batteries. Both types are valve-regulated and have significant ...

It's also called the VRLA battery, which is short for Valve Regulated Lead Acid battery. Sealed lead acid and valve regulated batteries are subsets of the lead acid battery, which is more commonly found in flooded form (known as flooded lead acid, or FLA). Like flooded batteries, the sealed lead acid battery is a rechargeable battery.
