Solar lights are powered by internal rechargeable batteries, charged through the day by a solar panel. The brighter the day, the more power is stored by the battery and the longer the light will shine. Light is produced by one or more LEDs; at dusk they turn on automatically, until turning off when the sun comes up.

Battery life and Power Storage Capacity: As with output, battery life and storage capacity vary greatly among different types of solar lights. Simpler pathway lights typically use an internal ...

A typical solar light contains 3 basic components, a solar panel to capture and convert solar energy to electricity, a lamp, and a battery to store the electricity. Solar lights also contain a photo sensor to detect the amount of light hitting the photovoltaic cells to determine whether it's dim enough to turn the light on.
