The electric breakdown strength (E_b) is an important factor that determines the practical applications of dielectric materials in electrical energy storage and electronics. However, there is a tradeoff between E_b and the dielectric constant in the dielectrics, and E_b is typically lower than 10 MV/cm. In this work, ferroelectric thin film ...

This would require reactors with a volume of 2,000 cubic metres, which could store around 4 gigawatt hours (GWh) of green hydrogen. Once converted into electricity, the stored hydrogen would supply around 2 GWh of power. "This plant could replace a small reservoir in the Alps as a seasonal energy storage facility. To put that in perspective ...
