tanks commonly used in residential settings: pressure tanks and nonpressurized storage tanks, also known as cisterns.

A Growing Water Storage Gap. Water is at the center of economic and social development; it influences whether communities are healthy places to live, good places to grow food, or have reliable clean energy.

There is growing concern that natural water storage is declining, the amount of built storage has declined, and what is available is ageing and waning. Over the past 50 years, more than 27,000 billion m³ of water storage has been lost due to melting glaciers and snowpack and the destruction of wetlands and floodplains.
