An Indian institute has developed technology for zero energy cool chamber an alternative of common refrigerator. This is an on-farm storage chamber, for fresh fruits, vegetables and flowers to extend their marketability. Storage of fresh horticultural produce after harvest is one of the most pressing problems of a tropical country like India.

A Zero Energy Cooling Chamber (ZECC), originally developed in India, is a small chamber made out of bricks and sand where farmers can store freshly harvested produce before it is transported to market. The ZECC works on evaporative cooling principles that can be used to provide a cool environment. MATERIALS NEEDED
