New energy electric vehicles will become a rational choice to achieve clean energy alternatives in the transportation field, and the advantages of new energy electric vehicles rely on high energy storage density batteries and efficient and fast charging technology. This paper introduces a DC charging pile for new energy electric vehicles. The DC charging pile ...

After obtaining the time-space distribution information of the energy storage electric vehicle charging pile at different times and in different regions, it is used as the input of the deep multi-step time-space dynamic neural network, and the network output is the dynamic electric vehicle charging pile. The experimental results show that this method can realize the ...

As a power electronic device, the power quality problem of charging piles is prominent, which will affect the power grid and nearby equipments. Focusing on the problem of ...

In this paper, the battery energy storage technology is applied to the traditional EV (electric vehicle) charging piles to build a new EV charging pile with integrated charging,...

With the development of electric vehicles, charging piles have been popularized. However, there are many problems in the security of charging piles in the market, especially information security accidents occur from time to time, so it is necessary to study the information security detection technology of charging piles. This paper studies the information security problem of electric ...

Penetration Test (SPT). This permits the adjustment of the measured N-value to the normalized N 60 for standard 60% energy transfer ...

new design and construction methods of the energy storage charging pile management system for EV are explored. Moreover, K-Means clustering analysis method is used to analyze the charging habit ...

A large number of distributions. Charging piles, as a plug-and-play charging method, have a large number and are increasing every year. Low input cost. To build a charging pile, the initial investment cost is low, the ...

In this study, to develop a benefit-allocation model, in-depth analysis of a distributed photovoltaic-power-generation carport and energy-storage charging-pile project was performed; the model was ...

The deployment of fast charging compensates for the lack of access to home chargers in densely populated cities and supports China's goals for rapid EV deployment. China accounts for total of 760 000 fast chargers, but more than 70% of the total public fast charging pile stock is situated in just ten provinces.

The construction of public-access electric vehicle charging piles is an important way for governments to promote electric vehicle adoption. The endogenous relationships among EVs, EV charging piles, and public attention are investigated via a panel vector autoregression model in this study to discover the current development rules and policy implications from the ...

End Bearing. The ultimate end bearing capacity of a single pile (Xu and Lehane, 2005) is estimated from; $Q_b = C_b q_{c-av} A_b$ ---- (7). where $C_b = 0.6$ for closed-ended driven pipe piles in sand and $C_b = 0.9$ for jacked piles in sand; q_{c-av} is the average cone tip resistance over a distance 1.5 times the pile diameter above and the same distance below the ...

In this paper, a method for rationally allocating energy storage capacity in a high-permeability distribution network is proposed. By constructing a bi-level programming model, the optimal ...

Therefore, this study proposes a shared charging concept for buildings, that is, shared photovoltaic, charging, and energy storage building (sPCEB). First, based on the analysis results of big data in cities or settlements of people, a locating method of the sPCEB system is introduced, and further proposes an optimal operating strategy that maximizes the ...

A number of technological and product innovations were released by GOTION HIGH-TECH on May 28th, including a 360Wh/kg semi-solid battery with a battery life of 1,000 kilometers, "Born For Second Use" JTM+ stacked stone swapping technology, YIJIADIAN intelligent mobile energy storage charging pile products.

Aiming at the problems of the existing field test for DC charging pile of electric vehicles, such as tedious preparation and complex operation process, a modular DC charging ...

In this calculation, the energy storage system should have a capacity between 500 kWh to 2.5 MWh and a peak power capability up to 2 MW. Having defined the critical components of the charging station--the sources, the loads, the energy buffer--an analysis must be done for the four power conversion systems that create the energy paths in the station.

This paper introduces a DC charging pile for new energy electric vehicles. The DC charging pile can expand the charging power through multiple modular charging units in parallel to improve the charging speed. Each charging unit includes Vienna rectifier, DC transformer, and DC converter. The feasibility of the DC charging pile and the effectiveness of

This article presents the optimal placement of electric vehicle (EV) charging stations in an active integrated distribution grid with photovoltaic and battery energy storage systems (BESS), respectively. The increase in the population has enabled people to switch to EVs because the market price for gas-powered cars is shrinking. The fast spread of EVs ...

Statistics show that the 2017 new-energy vehicle ownership, public charging pile number, car pile ratio compared with before 2012 decreased, but the rate of construction of charging piles is not keeping up with the manufacture of new-energy vehicles. China has built 55.7% of the world's new-energy charging piles, but the shortage of public charging ...
