This process is executed many times to determine the desired solution as represented in Fig 3 [1], [2], [9]. EN 50160 is the European standard on power quality in public distribution systems. Specially, the permissible deviation range of voltage in medium voltage grid that is defined by EN 50160 is represented in Table 1 [3], [4].

5 &#0183; Capacitors are physical objects typically composed of two electrical conductors that store energy in the electric field between the conductors. Capacitors are characterized by how much charge and therefore how much electrical energy they are able to store at a fixed voltage. Quantitatively, the energy stored at a fixed voltage is captured by a quantity called ...
