Battery capacity calculator converts between amp-hours and watt-hours. As you might remember from our article on Ohm's law, the power  $P$  of an electrical device is equal to voltage  $V$  multiplied by current  $I$ :  $P = V \times I$ . As energy  $E$  is power  $P$  multiplied by time  $T$ , all we have to do to find the energy stored in a battery is to multiply both sides of the equation by time:

To calculate amp hours, you need to know the voltage of the battery and the amount of energy stored in the battery. Multiply the energy in watt-hours by voltage in volts, and you will obtain amp hours. Alternatively, if you have the capacity in mAh and you want to make a battery Ah calculation, simply use the equation: Ah = (capacity in mAh)/1000.
