Battery capacity calculator converts between amp-hours and watt-hours. As you might remember from our article on Ohm's law, the power P of an electrical device is equal to voltage V multiplied by current I : $P = V \cdot I$. As energy E is power P multiplied by time T , all we have to do to find the energy stored in a battery is to multiply both sides of the equation by time:

To calculate amp hours, you need to know the voltage of the battery and the amount of energy stored in the battery. Multiply the energy in watt-hours by voltage in volts, and you will obtain amp hours. Alternatively, if you have the capacity in mAh and you want to make a battery Ah calculation, simply use the equation: Ah = (capacity in mAh)/1000.
