The use of multiple sections within a metallized film capacitor facilitates high voltage and reduced equivalent series resistance within a compact winding. As a result of high voltage and low inductance, large peak currents are, in principle, possible. The limitation to the peak current and power density is the ability of the end connection to withstand the peak ...

The Husum-based company FTCAP is one of the few manufacturers of high-voltage capacitors: These special film capacitors are available for voltages of more than 120 kV DC, which makes them ideal for use in medical devices, high-voltage power supply units, or even body scanners for building security. The product spectrum offered by FTCAP includes ...

Capacitors C X1 ­- 4 perform smoothing functions throughout the powertrain. In order to handle the high operating voltages of modern electric vehicles, EV manufacturers currently use multiple lower-voltage capacitors. While these bulky through-hole mounted film capacitors work, they need special handling during manufacture.
