DC Microgrid based on Battery, Photovoltaic, and fuel Cells; Design and Control

Microgrid has various energy sources (solar, wind, etc.), storing devices such as battery, ultracapacitor, fuel cell- s,etc., and different AC/DC loads. DC microgrids rely on energy storage systems (ESS) to store energy when supply outpaces demand and supply is insufficient (Ni et al. 2020). While many storage equipment may be used in a micro-grid, we need to make the ...
