EV CHARGING ANYWHERE. When expanding electric vehicle charging networks, one of the hurdles operators come across is the limited availability of power from the electric grid, this can result in costly grid upgrades making the location too expensive for EV charging or slower charging speeds than required.

Here is why copper is a crucial component to vehicle manufacturers: Cost Copper costs roughly \$0.20 per ounce, compared to silver (\$15/oz) and gold (\$1200/oz), making it by far the cheapest option for electrical wire. Conductivity: Copper is nearly as conductive as silver - the most conductive metal - but comes at a fraction of the cost ...
