Measuring the voltage of a 12-volt battery is a quick and easy way to determine its state of charge. A fully charged 12-volt battery should read between 12.4 to 12.8 volts on a voltmeter. If the battery reads above 12.9 volts, it is considered to be overcharged, and if the battery reads below 12.4 volts, it is considered to be undercharged.

Q3. How do I determine the watt hours (Wh) rating of a battery? A3. To determine watt hours (Wh), multiply the volts (V) by the ampere hours (Ah). Example: A 12-volt battery rated to 8 Amp hours is rated at 96 watt hours ($12 \times 8 = 96$). For milliamp hours (mAh), divide by 1000 (to get to Ah) and then multiply by the volts. Q4.
