

How much power does a 36 volt battery have

A well-maintained golf cart battery would be able to last up to six years. The minimum predicted lifespan would be at four years. Golf carts typically contain 6 volt batteries, 8 volt batteries, or 12 volt batteries. The 6 volt golf cart batteries and 8 golf cart batteries usually have a 36 volt or 48 volt electrical drive system.

I have a 12-volt refrigerator here today, if I'm going to use it on a two-day camping trip. Let's say maybe I use 36 hours of battery run time. If I do a simple calculation of saying 36 hours times 50W it yields 1800Wh, that's a huge number for battery capacity, and it doesn't make sense.

A 12V battery can give a lot of power. It all depends on how it is used. If you are using it to run a small appliance, then it will not give as much power as if you were using it to run a car or truck. The size of the battery will also affect how much power it can give. A larger battery will be able to give more power than a smaller one.

Yeah, we want more power, 250w not much over 189; a person power, guess some 1 said "Let them have 189; as much as a moped", but we ended up with 189; the speed, instead of the power of a 25cc engine. Click time "20 is plenty" (but let's be naughty & go at 40).
