Fake Regular Non rechargeable Batteries I have found a difference here. Regular AA/AAA batteries that are brand named. Seem to work quite well. But again, check the packaging for signs of tampering, quality and age. Other non branded batteries have been very very poor in quality. And are not able to power something like a camera.

The batteries voltage really doesn't drop much during its life. They tend to work until they don't work. Regular battery testers and multimeters don't work because the batteries open test voltage doesn't really drop all that much as the battery wears out/gets used up. There are pulse testers out there that can test these types of batteries.
