To calculate run time: $\text{Run Time (hours)} = \frac{\text{Battery Capacity (Wh)}}{\text{Load Power (W)}}$ Example: A 200Wh battery running a 50W device has a run time of 4 hours ($200 \div 50 = 4$) ...

Battery power refers to the rate at which an electrical current can be moved through a battery, and it's measured in watts, or more often C-rate. The higher the power, the faster a battery can deliver its stored energy (or store incoming energy). C-rates are commonly used to describe battery power. For example, a 1C discharge rate describes ...
