

How to fix a broken battery pack cable

* The cable can actually be threaded through the rubber/plastic grommet if you have the patience to remove the broken cable from it and make the two small holes bigger with a drill bit. This can be frustrating but is the only way to keep the original appearance. Be sure to leave enough cable after the grommet for soldering.

Picking up my quest 2 tomorrow and I was going to buy the KIWI elite strap and fix a 10000mAh battery pack to the back. My understanding is the battery pack connects directly to the quest2 via USB-C cable.

Quality cells for a multi-cell pack, on the other hand, are capacity-matched, lest they fail. A battery shop may salvage good cells from a failed pack for reuse but the recovered cell should be checked for capacity, internal resistance and self-discharge - the three key health indicators of a battery.

If the outlet works, check the cable. To check the cable, turn the multimeter's central knob to the resistance setting (Ohms, or O). Then, touch the same pin on opposite ends of the cable with the multimeter's two probes. If the multimeter shows 0, the wire is functional. An infinity means the wire is broken and needs to be fixed or ...

It doesn't matter that you don't have the older cable. Just drain the battery until you don't see a light coming from the controller when you press for it to power up. Then plug it to a wall or your xbox. I am pretty sure that it will come to life. If your battery is not busted and suddenly stopped charging as mine did, it will become usable again.

By my calipers an 18650 battery is 18mm in diameter while my V. 1 battery pack's thickness ~13mm (pre-swollen). Just laying an 18650 battery atop the driver while the Minirig is upside down and trying to fit the back cover over it reveals the 18650 based pack would be about 4mm too thick. So installing a Minirig V. 3 battery pack is no-go.

If you open your device and see white, crusty crystals on your battery terminals (a.k.a. battery contacts), they've most likely corroded. Common replaceable batteries like AAs and AAAs degrade and start to break down over time, and a chemical reaction causes corrosion.

Check cables and reset your power supply unit: Disconnect the charger from your Surface, unplug the power cable from the power outlet in the wall, and then disconnect any USB accessories. Wait at least 10 seconds. This gives the charger time to reset. After that, clean the connector with a soft, dry, lint-free cloth, and check for any damage.
