Voltage Is A Lithium Ion Battery Dead? A lithium ion battery starts at 4.2 volts and quickly drops to 3.7 volts.

Identify the battery type and specifications: Determine the battery type (e.g., AA, AAA, lithium-ion, lead-acid). Check the battery's voltage rating (usually printed on the battery or in the device's manual). Note the battery's capacity, typically measured in milliamp-hours (mAh) or amp-hours (Ah). Visually inspect the battery:

The capacity of a lithium-ion battery is measured in ampere-hours (Ah). 1 amp hour means you can draw exactly 1 amp from the battery in 1 hour. So, ampere hours are the result of ampere hours. Likewise, one amp hour means you can draw two amps in half an hour, or a quarter in four hours.
