maintain long-term performance and efficiency in daily use. While the OS doesn't offer a built-in method to set up a custom battery charge limit, there are still ways you can configure the battery settings.

A battery at 0% isn't completely depleted. There is still some stored energy that the battery needs for both chemical health, and startup power.

A battery pack module is constructed of lithium-ion cells that are joined to one another to form an electric vehicle's battery pack. To build a battery pack, further connections between these modules and other modules are made. This battery pack's management is made easier and more serviceable thanks to the modular architecture.
