

How to repair a damaged battery casing

Of the common signs your battery is failing, a swollen battery is the most urgent and dangerous. Battery swelling happens due to a little thing called outgassing, which occurs when a battery gets overcharged, damaged, or simply old. Under those circumstances, the chemical reaction that keeps your battery running breaks down and, just like the name suggests, outputs gas.

If you often lose battery doors, consider drilling two small holes in it, and another in the remote then using wire/thread looped through the holes to attach the door to the remote, tucking most of the thread inside the remote when the door is fitted. Share. Improve this answer.

The previous posters all have good input here. The fact is that the battery can be repaired - there are plenty of guides available to walk you through the process of emptying a battery and taking it apart or even fixing the case while it is assembled.
