Maximum benefit can be obtained by installing the shunt capacitors at the load. This is not always practical due to the size of the load, distribution of the load, and voltage level. Depending on the need, the capacitor banks are installed at extra-high voltage (above 230 kV), high voltage (66-145 kV), and feeders at 13.8 and 33 kV.

Indoor capacitor Storage in a dry place at temperatures between - 30 C and +40 C; humidity must be assessed so that there is no condensate formation. For better ventilation, the package must be opened.
