In this article, we discuss the 10 most advanced battery technologies that will power the future. If you want to read about some more advanced battery technologies that will power the future, go ...

KATHMANDU, NEPAL, August 27, 2024 - Nebula Energy and Gogoro Inc (Nasdaq: GGR), a global technology leader in battery-swapping ecosystems that enable sustainable mobility solutions for cities, today announced commercial availability of Gogoro's battery swapping and ...

The rise of electric vehicles, along with increasing demand for energy storage and mobile electronics, coupled with concerns over the availability of materials like cobalt and lithium, have made research into new battery technologies a charged topic. Academic labs and industry alike are hunting for ...

Lastly, adaptability is a key trait for any EV repair technician. As mentioned earlier, the technology and techniques for maintaining and repairing EVs are ever-changing. Hence, EV technicians should be flexible enough to adapt to new circumstances, whether it's a new model of an electric car, a new diagnostic tool, or a novel repair technique.

The EV maintenance training program offered by Kathmandu Technician covers a wide range of topics including EV technology basics, battery management systems, charging infrastructure, and diagnostic techniques. The course is designed to provide students with a holistic understanding of EVs from basic components to complex components.

A type of battery invented by an Australian professor in the 1980s is being touted as the next big technology for grid energy storage. Here's how it works.

NADA Auto Show Gogoro & Nebula Energy launch in Kathmandu with 45 battery swap stations, 3 smart scooter models Companies introduce the new Pulse- The world's first hyper-electric scooter, JEGO the high performance city ride, and CrossOver GX250- first ever SUV of scooters Smartscooters at NADA Auto Show in Kathmandu and unveil 45 new ...

As battery technology continues to improve, EVs are expected to match or even surpass the performance of internal combustion engine vehicles, leading to a widespread adoption. ... In addition to gaining efficiencies in battery technology, closed-loop systems provide a new approach to battery recycling that conserves valuable resources as well ...

All models feature CATL Battery Technology, providing a range of 300 km on a full charge, and a motor that generates an impressive 310 Nm of torque. The 14-seater electric van is equipped with a 50.23 kWh ...

The race is on to generate new technologies to ready the battery industry for the transition toward a future with more renewable energy.

MIT engineers designed a battery made from inexpensive, abundant materials, that could provide low-cost backup storage for renewable energy sources. Less expensive than lithium-ion battery technology, the new architecture uses aluminum and sulfur as its two electrode materials with a molten salt electrolyte in between.
