Aluminum busbars are attractive for the battery cell connection because they provide reliable electrical performance while helping to save total battery pack weight since aluminum busbars are typically 50% lighter than copper busbars.

The red circles show data from 5 electric vehicle battery busbars. The current is an estimated continuous rating and plotted versus the cross-sectional area in mm². The gradient of the "straight line fit" shows that 5.9A/mm² is a rough estimate for copper busbar size. However, to be on the safe side of this I would initially size at

Make certain that you know exactly what you are buying with copper. Most ground rods and even some "bus bars" are copper plated, not solid copper. And with the price of copper so high, there is probably zinc-copper alloys ...

Optimizing Busbars for Advanced Applications On the surface, busbars appear to be simple -- they are just rigid metal bars, after all, albeit ones that can support the high power required for today's electric vehicles (EVs), both inside the battery pack and, increasingly, outside the battery pack. That simplicity can be deceiving.
