The lead-acid battery is a type of rechargeable battery first invented in 1859 by French physicist Gaston Planté; is the first type of rechargeable battery ever created. Compared to modern rechargeable batteries, lead-acid batteries have relatively low energy density spite this, they are able to supply high surge currents. These features, along with their low cost, make them ...

Sparking from a battery terminal as it is connected or disconnected from the charging system is more than adequate as a source of ignition energy. That's why lead acid batteries should only be charged in well ventilated areas.
