Solar paint, also known as photovoltaic paint, is a solar cell in liquid form. The paint can be applied to any conductive surface like metal or glass. Once dried, the solar paint creates an invisible solar cell on that surface that can capture sunlight and convert it into electricity. Solar paint is designed to be like standard paint, but with hundreds of millions of solar cells mixed in. ...

Recently, a few studies suggest that photovoltaic (PV) modules could be used to implement outdoor LiFi transmissions, i.e., under direct sunlight exposure. In this paper, we propose to compare the behavior of a PV module and a commercial APD-based photodetector (without any optical lens or colored filter) for experimental LiFi transmissions on both indoor ...

Organic solar cells (OSCs) have attracted considerable attention for potential commercial applications because of their light weight, mechanical flexibility, semitransparency, and large-area manufacturing properties. Recent advancements in Y-series non-fullerene acceptors (Y-NFAs) and polymer donors have significantly improved the power conversion efficiency of OSCs. In ...

Perovskite solar cells (PSCs) have shown great potential for next-generation photovoltaics. One of the main barriers to their commercial use is their poor long-term stability under ambient conditions and, in particular, their sensitivity to moisture and oxygen. Therefore, several encapsulation strategies are being developed in an attempt to improve the stability of ...

A solar module comprises six components, but arguably the most important one is the photovoltaic cell, which generates electricity. The conversion of sunlight, made up of particles called photons, into electrical energy by a solar cell is called the 'photovoltaic effect'; - hence why we refer to solar cells as 'photovoltaic', or PV for short.

In this paper, a stochastic model is proposed for a joint statistical description of solar photovoltaic (PV) power and outdoor temperature. The underlying correlation emerges from solar irradiance that is responsible in part for both the variability in solar PV power and temperature. The proposed model can be used to capture the uncertainty in solar PV power ...
