

In summary, the device with the configuration of FTO/ZnO/perovskite/P3HT/carbon was fabricated successfully at the low processing ...

The solid-state Li-O2 battery is considered an ideal candidate for high-performance energy storage because of its high safety, due to use of non-flammable and non-volatile electrolytes, and high specific energy, as it uses Li metal and O2 gas as active materials. We present an original solid-state Li-O2 cell

Today, organic-inorganic perovskite hybrid solar cells are especially attracted by the energy industries to design and develop new-generation photovoltaic devices. They are the most promising materials for high PCE and cheap solar cells. They can also solve the current energy demand of society and the global crisis. Over the past few years, the power conversion ...

Aqueous Zn-CO2 batteries are a new technology for reducing carbon dioxide emissions and converting CO2 into valuable products. ... In this study, we developed an efficient and cost-effective CO2RR perovskite catalyst, by partially substituting Fe t EN ...

Therefore, fabricating perovskite/carbon hybrids is proposed to homogeneously disperse perovskites in/on carbon. ... Porous perovskite LaNiO 3 nanocubes as cathode catalysts for Li-O 2 batteries with low charge potential Sci. Rep., 4 (2014), p. 6005 View in X. ...

The unique properties of perovskites and the rapid advances that have been made in solar cell performance have facilitated their integration into a broad range of practical ...

DOI: 10.1016/j.jcis.2023.09.138 Corpus ID: 262221246 Interface engineering of Ruddlesden-Popper perovskite/CeO2/carbon heterojunction for rechargeable zinc-air batteries. Layered lithium cobalt oxide, LiCoO2 (LCO), is a promising catalyst for oxygen evolution ...

Low-Temperature Graphene-Based Paste for Large-Area Carbon Perovskite Solar Cells Paolo Mariani, Leyla Najafi, Gabriele Bianca, Marilena Isabella Zappia, Luca Gabatel, Antonio Agresti, Sara Pescetelli, Aldo Di Carlo,* Sebastiano Bellani,* and Francesco ...

Based on the advantages of aqueous zinc batteries, the overall efficiency of SRBs could be further enhanced by stable and efficient hole-transport-layer-free carbon-based perovskite solar cells 44 ...

Sanshuang Gao et al. discovered a non-metallic mesoporous carbon for Zn-CO 2 batteries [20] that achieved a Faraday efficiency close to 100% and an energy efficiency of 52.8% over 300 cycles. Although the catalysts mentioned above have shown good catalytic performance and high Faraday efficiency, they tend to be expensive and complicated to ...

Hybrid iodobismuthates give a new type of environmentally-friendly anode for lithium-ion batteries with impressive capacities, rate and stabilities. DOI: 10.1039/D0TA07414D Corpus ID: 234154237 Hybrid perovskite-like iodobismuthates as low-cost and stable anode

Photocatalytic conversion of solar light into chemical fuels represents an appealing pathway by which a sustainable energy future might be realized. However, great scientific challenges need to be addressed for ...

Rapid low-temperature synthesis of perovskite/carbon nanocomposites as superior electrocatalysts for oxygen reduction in Zn-air batteries October 2017 Nano Research 11(6)

a Galvanostatic cycling of Li 1.5 La 1.5 MO 6 double perovskites mixed with 5% carbon black and 5% PTFE binder, between 0.01 and 2.8 V vs Li at a specific current of 36 mA g ...

Carbon-based electrodes represent a promising approach to improve stability and up-scalability of perovskite photovoltaics. The temperature at which these contacts are processed defines the absorber grain size of the perovskite solar ...

1. Introduction In recent decades, great attention has been paid to perovskite solar cells (PSCs), owing to their facile manufacture and low-cost solution processing. 1-7 Halide perovskite materials with the ABX 3 structure have the advantages of strong absorption ability, tunable band gap, ambipolar (electrons and holes) transport properties, low exciton binding energy, and ...

In that work, SCAPS-1D was accustomed to modeling and imitating the FTO/In 2 S 3 /CsPbIBr 2 /C 60 /CuSCN/C carbon-based all-inorganic perovskite battery. The current density-voltage (J-V), quantum efficiency (QE), and energy band structure of perovskite

In this work, we report the performance of the LaCoO3 perovskite oxide as a cathode catalyst for an Al-air battery. LaCoO3 was prepared using the sol-gel method and its suitability as a catalyst has been studied. XRD studies of the perovskite revealed a monoclinic symmetry with no secondary phase being obser

Dexit et al. investigated its feasibility for the scalable fabrication of solid-state battery components, ... scalable, and low-cost carbon electrodes for perovskite solar cells. Adv. Mater ...

Here, we demonstrate the substantially improved PSC performance by capping the photoactive layer with low-dimensional (LD) perovskitoids. The undercoordinated Pb ions and metallic Pb at the surfaces of ...

Photo-charged battery devices are an attractive technology but suffer from low photo-electric storage ... Xu, J. et al. Efficiently photo-charging lithium-ion battery by perovskite solar cell. Nat ...

The conventional ceramic synthesis of perovskite oxides involves extended high-temperature annealing in air and is unfavorable to the in situ hybridization of the conductive agent, thus resulting in large particle sizes,

low surface area and limited electrochemical activities. Here we report a rapid gel auto-combustion approach for the synthesis of a perovskite/carbon ...

In recent years, perovskite solar cells (PSC) have attracted the attention of numerous research groups due to the dramatic increase in their energy conversion efficiency ...

Carbon-based electrodes represent a promising approach to improve stability and up-scalability of perovskite photovoltaics. The temperature at which these contacts are processed defines the absorber grain size of the perovskite solar cell: in cells with low ...

2.1 Carbon-Based Perovskite Solar CellCarbon is an abundant and low-cost material and has a work function of -5 eV which is higher compared to that of gold, which is -5.1 eV [].Also, its energy level is conveniently located to absorb the hole of perovskite ...

In the next section, specific applications of perovskites in batteries will be discussed. 2 Perovskite Materials in Batteries ... Park MG, Ahmed R, Seo MH, Nazar LF, Chen Z (2015) Perovskite-nitrogen-doped carbon nanotube composite as bifunctional catalysts ...

As a clean-energy-generating technology, the top priority of all PV technology is to replace and refuse fossil fuel technology for decarbonization first (R0) and to source ...

The carbon-based all-inorganic perovskite battery with FTO/In 2 S 3 /CsPbIBr 2 /C 60 /CuSCN/C structure was designed and simulated. ... Highly efficient semitransparent CsPbIBr 2 perovskite solar cells via low-temperature processed I n 2 S 3 as electron, 57 () ...

Herein, oxygen vacancy-rich porous perovskite oxide (CaMnO 3) nanofibers coated with reduced graphene oxide coating (V-CMO/rGO) are developed as the air electrode catalyst for low-temperature and knittable Zn-air batteries. V-CMO/rGO exhibits top-level

Here, the authors propose a device comprising of perovskite solar cells and aqueous zinc metal batteries connected via the sandwich joint electrode method.

MHP-PVs are in a unique position to learn from commercial technologies to push PV sustainability further. MHPs offer similar thin-film advantages as CdTe, with low embodied energy and carbon 11 ...

This review paper focuses on recent progress and comparative analysis of PBs using perovskite-based materials. The practical application of these batteries as dependable ...

In recent years, the perovskite solar cells have gained much attention because of their ever-increasing power conversion efficiency (PCE), simple solution fabrication process, ...

A fundamental understanding of the electrochemical behavior of hybrid perovskite and nitrogen-doped (N-doped) carbon is essential for the development of perovskite-based electrocatalysts in ...

Carbon-based perovskite solar cells (c-PSCs) have attracted increasing attention due to their numerous advantages including ease of fabrication, the potential of assembling flexible devices, low ...

Later, in the same group, a combusted cellulose-like carbon templated synthesis strategy was also reported to prepare hierarchical porous SrNb 0.1 Fe 0.9 O 3-d perovskite electrode. 70 Even with these cases, owing to the relatively low ...
