After the inverter has converted your solar panels' DC electricity into AC electricity, the AC cable will take it to your PV distribution board - that is, a fuse box for your solar panels. And in the vast majority of cases, this distribution board is connected to the supply meter - it won't need connecting to your existing consumer unit.

The biggest advantage with ground-mounted solar panels is that they offer greater control over your solar panel direction and angle. Solar panels need to face either south or southwest to receive maximum direct sunlight. On flat ground, you can position solar panels in any direction you want to maximize sun exposure, unlike on a slanted roof.
