A solar module comprises six components, but arguably the most important one is the photovoltaic cell, which generates electricity. The conversion of sunlight, made up of particles called photons, into electrical energy by a solar cell is called the 'photovoltaic effect' - hence why we refer to solar cells as 'photovoltaic', or PV for short.

The battery in the BESS is charged either from the PV system or the grid and discharged to the household loads differently depending on the system function. The BESS can either be fitted to a
