Solar array mounted on a rooftop A solar panel is a device that converts sunlight into electricity by using photovoltaic (PV) cells. PV cells are made of materials that produce excited electrons when exposed to light. The electrons flow through a circuit and produce direct current (DC) electricity, which can be used to power various devices or be stored in batteries.

Hybrid Inverters: Also known as battery inverters, these devices are capable of managing both solar panel arrays and energy storage systems. They allow for more sophisticated solar energy management and have gained popularity as battery storage systems become more common in residential solar installations.
