Types of Solar Thermal Collectors. There are three major types. Let us learn about each of the types in detail:

1. Flat Plate Collectors. The solar radiation received on a surface is captured by flat plate solar collectors and used to heat a fluid. The heat loss is often decreased because of the greenhouse effect.

The absorber plate of the collector captures solar energy and transfers it to the absorber fluid, increasing its internal energy, which may subsequently be used for various purposes.

Many types of solar collectors are available to harness solar energy. Typically, they are composed of an absorber plate that gathers the sunlight and uses this solar energy for different applications, such as space heating, pool heating, etc. That being said, let us now review what solar collector types are available. 1. Flat Plate Collectors ...
