\$begingroup\$ well the recommended supply voltage for the arduino is 7-12 V on the website. I thought that the 5V output i get may not be exact so i decided to increase it to 6V to feed the arduino with sufficient power. According to the website it is not advised to supply the arduino with a voltage higher than 12V.

What are the main parts of a battery? The basic power unit inside a battery is called a cell, and it consists of three main bits. There are two electrodes (electrical terminals) and a chemical called an electrolyte in between them. For our convenience and safety, these things are usually packed inside a metal or plastic outer case. There are ...
