This work summarises the results of development and long-term testing of two prototype models of industrial-scale metal-hydride thermal sorption hydrogen compressors, TSC1-3.5/150 (up to 11 Nm 3 h -1; water cooling/steam heating) and TSC2-3.5/150 (up to 15 Nm 3 h -1; heating and cooling by circulating oil).Both compressors have a two-stage layout ...

Injecting hydrogen into subsurface environments could provide seasonal energy storage, but understanding of technical feasibility is limited as large-scale demonstrations are scarce.

On the other hand, the investment in the P2G system does not increase linearly with the scale of the system, thus large-scale production can dilute the fixed investment cost. Thus, a green hydrogen-based Energy Storage as a Service (ESaaS) mode is proposed to reduce operation costs and dilute fixed investment costs.
