DC solar panels, also known as photovoltaic (PV) panels, are devices that convert sunlight directly into direct current (DC) electricity. The key components are PV cells made of semiconducting materials like silicon. When sunlight hits these cells, the energy knocks electrons loose, allowing them to flow freely to produce an electric current.

In order to run 12V DC appliances from a 24V or 48V system, you need a 48V to 12V or 24V to 12V step down converter unless the appliances are variable voltage which is still a bit rare at present - though we predict that more and more will be available in the future - let's see if we are right!
